

# EFL Tree Cleanups

2019-11-23 SRUK  
Stefan Schmidt

# Heads up

---

- If I propose to remove your favourite feature do not get angry, these are just my own **ideas and proposals**
- If we can agree on actions on these I would like to see names attached to them
- Feel free to point out all the areas I missed here

# Elocation

---

- Marked Beta and not used
- Upstream moved onwards to the GeoClu2 API
- Would need a full rewrite on our side
- Need to carefully check its usage in Elementary
- `devs/stefan/elocation-removal` (26 files changed, 2 insertions(+), 4081 deletions(-))

# Gstreamer 0.10

---

- Gstreamer 0.10 is not supported upstream
- Last release from 2012 (0.10.36)
- Distros are already removing the package  
Debian, Fedora, etc
- Gstreamer 1.x support would obviously stay
- [devs/stefan/gstreamer010-removal](#) (14 files changed, 6 insertions(+), 4290 deletions(-))

# Escape

---

- PS3 gameOS support lib, still PS3 development out there?
- Not buildable with meson
- Its EAPI, but not used anywhere in the current code
- Broken for a long time already?
- When we made the windows support internal we did not consider these EAPIs part of our ABI
- If not remove, could we at least deprecate?
- [devs/stefan/escape-removal](#) (7 files changed, 745 deletions(-))

# Esensor

---

- Part of Eeze
- Based on a Tizen lib (still available?)
- It's EAPI so we might be only able to deprecate it
- If we agree I can handle this

# Ecore\_audio

---

- Screams for attention
- Used by edge multisense

# Xgestures

---

- Anyone having some background on this?
- Mouse gesture recognition program?
- Latest release from 2005
- From my searches only Gentoo still has this package
- Are we still supporting this?

# JS Bindings

---

- Not buildable with meson
- Felipe tells me there is an user
- Have yet to see community interaction from this user
- Felipe also has a WIP branch with a rewrite to simplify generation
- Any other known users?

# C++ Bindings

---

- Maintenance ongoing
- Generator entangled with C# support
- Get the C++ examples linking memory problem fixed or disable them by default
- Any known users?

# Code Duplication

---

- Tools to help with finding code duplication and re-factoring (Duplo, Symian)
- Ecore\_evas and Elementary as targets
- Ecore\_evas should use inheritance
